

Installation

This chapter details the steps to setup environment and install the application.

Environment requirement

- PHP >= 8.0
- mysql >= 8.0
- apache >= 2.4.0
- npm >= 18.0
- gnumake

Build steps

Run the following commands in the source code directory:

```
npm install .  
make build  
php migrations/script.php run
```

Installation steps

Copy the source code directory to the webroot directory. The application should be available on localhost:127.0.0.1 by now.
